Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 2 and 7-10 are rejected under 35 U.S.C. 103(a) as being obvious over either Helling et al. (U.S. Patent No. 6,558,887) or Helling et al. (U.S. Patent No. 6,534,254) in view of Ohshima et al. (U.S. Patent No. 5,814,439).

Helling et al. ('887) and ('254) each disclose a color photographic material comprising a support having thereon at least one red-sensitive silver halide emulsion layer containing a cyan dye-forming coupler, at least one green-sensitive silver halide emulsion layer containing a magenta dye-forming coupler, at least one blue-sensitive silver halide emulsion layer containing a yellow dye-forming coupler, characterized in that said red-sensitive layer contains a cyan coupler inclusive of the formula of the instant claims (respectively column 1, line 27; column 2, line 5), and an emulsion having a chloride content of at least 95 mole% (examples in each and respectively column 5, line 4; column 20, line 34). Although general reference is made therein to *Research Disclosure* for the use of known photographic sensitizers, neither Helling et al. ('887) or ('254) illustrate the use of iridium in the silver halide emulsion layer.

Ohshima et al. teaches the use of iridium in the light-sensitive silver halide emulsion layer of a color photographic element containing an emulsion having a silver

chloride content of at least 95 mole%, which results in excellent storability and improved sensitivity.

It would have been obvious to one of ordinary skill in the requisite art at the time the invention was made to incorporate iridium in the silver halide emulsion layer containing at least 95 mole% chloride, as taught in Ohshima et al., such as the red-sensitive layer of the photographic element of either Helling et al. ('887) or ('254) containing the inventive cyan dye-forming coupler, with reasonable expectations of achieving, absent object evidence to the contrary, the advantages taught therein as well as those associated with the use of iridium.

The applied references Helling et al. ('887) and ('254) have a common inventor/assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR 1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in accordance with 37 CFR 1.321(c). For applications filed on or after November 29, 1999, this rejection might also be overcome

Art Unit: 1752

by showing that the subject matter of the reference and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(I)(1) and § 706.02(I)(2).
